Acme Production Incident Report

Incident ID: INC-2024-017
Date: 14 November 2024 Severity: High

Summary: The checkout service was unavailable for 38 minutes after a configuration change removed a required database credential. Customers could not complete purchases.

Root cause: A deployment shipped a config file that pointed the checkout service at a database user that no longer existed.

Resolution: The on-call engineer rolled back the deployment. The service recovered within four minutes of the rollback.

Follow-up: Add a startup check that verifies database credentials before the service accepts traffic.
